- Python
- Dart & Flutter

2. Frontend and framework

- Vue.Js
- React.Js
- Wordpress
- JavaScript
- Openlayer
- Leaflet

3. Database

- PostgreSQL
- MySQL

4. Database Spatial

- Geoserver (Postgis)

5. Other

- Git VCS
- C language
- Java
- Netbeans
- Linux Server (Ubuntu, Debian)
- Docker
- Arduino / ESP32

6. Cloud Computing

- AWS Cloud

Project Experience

• SIMONIKA (2020) (Full Stack Role)

Development of the SIMONIKA Application (Water Quality Monitoring System) owned by the East Java Provincial Government. In this application, a system is created to accommodate all data on the location of bridges or rivers in East Java. This is intended so that the East Java Provincial Government has river water data. the data will be processed which will later be used as a parameter to measure the level of pollution in the river and that location. by using predefined parameters such as microbiology, chemistry, and physics. which is calculated using STORET Standard and IP Standard.

Technology used : Windows (OS), Laravel 8, MySQL (Database), JavaScript

• SITARUBOYO (2023) (Full Stack Role)

This application belongs to the Surabaya city government for monitoring archival data and spatial planning throughout the city of Surabaya. the presence of the application is to receive reports, store archive data and spatial data throughout the city of Surabaya. This application uses SSO authentication and consists of 3 roles, namely administrator, district and village. in this application consists of 2 types

of data types, namely tabular data and also spatial data. This tabular data is used to handle tableable data and complete reports.

Technology used : Linux Ubuntu (Server), Laravel 8, PgSQL (Database), Geoserver (Spatial Data)

- **Serviskita.com (2021) (Full Stack Role)**

This website and application are online shuttle services. the purpose of making this application is to make servicing of laptops, PCs and printers easier from home. This website belongs to a partnership company in Surabaya which provides laptop and computer service services. This application has at least 5 user roles. Among them superadmin, admin, client, officers, technicians. This website consists of two parts. The first is the UI/UX company profile using WordPress and for the management application using Laravel 8, with the database used by MySQL. This application is equipped with a myriad of complete features. starting from authentication using Google Oauth, email verification, user management, service, inventory, promos, financial reports, balance for each account, and also bookkeeping. with automatic calculations to make it easier for companies and also for the convenience of online service services.

Technology used : Laravel 8, MySQL (Database), JavaScript , API

- **PNBP-PKH (2023) (Full Stack Role)**

This specific application belongs to the Ministry of Environment and Forestry of the Republic of Indonesia. This application project is used to monitor mandatory payment data throughout Indonesia, including to receive payment data, generate billing codes, automatic letters, for reminders, due dates, and also installments. In addition, this application is equipped with an electronic signature feature for correspondence. This application is considered quite complicated because it was built using Vue.Js for the Front End and Laravel for the Backend. For data exchange using RestFul API.

Technology used : Vue.Js (Front End), Laravel 9 (Backend) , PgSQL(Database), JavaScript , RestFul API.

- **Basis – Data Application (2024) (Full Stack Role)**

The database application is an application owned by the regional apparatus organization of the city of Surabaya in the government and people's welfare section containing everything in the regional apparatus organization such as sub-district data, sub-district one Surabaya. and also contains spatial analysis data which contains PBB data, building data, and data on the distribution of scholarships in the city of Surabaya.

Technology used : Macos (OS), Geoserver, Laravel, Postgresql, Ubuntu Server, Javascript, Openlayer (Map Handler).

- **Infrastruktur As A Service For TaniPintar Platform (2024) (Devops Role)**

This project is a final assignment project carried out at the Surabaya State Electronics Polytechnic campus. This platform was created using the AWS Cloud which is the basic infrastructure. used as a platform for receiving and storing data from IoT devices and as a platform for deploying machine learning and live websites to display weather forecasts and soil fertility monitoring data

Technology used : Macos (OS), AWS Cloud Computing, ESP32, Arduino IDE, Docker

(testing phase)

Project Description Of Basis Data

This application is a project that belongs to my best and biggest project category. I am very happy and grateful to be able to participate in working on this application project. This PNBP – PKH application is an application system for Non-Tax State Revenue in the field of Use of Forest Areas or in Indonesian called PNBP-PKH (Penerimaan Negara Bukan Pajak Penggunaan Kawasan Hutan). This specific application belongs to the Ministry of Environment and Forestry of the Republic of Indonesia. This application project is used to monitor mandatory payment data throughout Indonesia, including to receive payment data, generate billing codes, automatic letters, for reminders, due dates, and also installments. In addition, this application is equipped with an electronic signature feature for correspondence. This application is considered quite complicated because it was built using Vue.js for the Front End and Laravel for the Backend. For data exchange using RestFul API.

2023

Role/Position*Full Stack Web Developer***Publication Link***[Arisohib.github.io/myProfile](https://arisohib.github.io/myProfile)***Project Description My Portfolio**

This is my own portfolio website project. In my opinion, this website project is included in the best category, because when it was made, I was also just learning React.Js. My Portfolio profile website contains a summary of my profile, the tools I usually use and also the skill set that I have mastered. In addition, there is also a CV page on the website. And also a big project that I've worked on. At the time of making this project I used open source resources also on github. The challenge when working on this project was that this project was the newest framework that I had just mastered and by learning and trying it finally made my portfolio profile website usable and accessible online.
